****Note:** We run all the models every AE Run using an updated pedigree file but for the months July – October we do not update the phenotype for Fertility, Functional Survival, Calving Difficulty or Gestation length. This way any new animals get a BW estimated but part season information for these traits is not used and this reduces the risk of under or overestimate of the BVs.

***Data Deadline** - please note that overseas bulls, which have not had an AB Code applied for need to be received in the NZAEL email inbox 4 days before the data deadline.
